

## How safe are you?

## More about Safe Dayz™

- Safe Dayz™ is an app based telematics solution that rewards clients for being safe on the road. The solution does not require the installation of devices to a car, and is accessible from the Momentum app at no cost.
- Safe Dayz™ measures the safety of the individual, both driver and passenger, and not the safety of the car insured.
- Once activated, clients receive individual scores at the end of every journey based on the following categories: time of day, relative speed, route familiarity, smoothness on the road, speeding, acceleration and deceleration. Clients only need to obtain an average 60% daily score to start earning Safe Dayz™ rewards.
- Momentum clients can download the free app and activate Safe Dayz™ from their smart phones. Location settings need to be on to measure the safety of the user on the road.
- Momentum car and home insurance clients can earn up to 30% cash back every year, even if they claim. Multiply members can also earn points to boost their status so they can qualify for more discounts from South Africa's big brands.
- Momentum will not consider information obtained from the use of Safe Dayz™ when assessing client claims or during the review of premiums at anniversary of their policies.
